

# HOUSEHOLD PESTICIDES

**35 YEARS TAKING CARE OF YOU**

# INTRODUCTION

**Household pesticides** are chemicals used to control or kill pests that can harm human health or damage property. These pests can include insects, rodents, and weeds. Household pesticides are products that are used in and around homes to eliminate pests. It is important to use these products safely and according to their labels to minimize the risk of harm to humans, pets, and the environment.

# INSECTICIDES

Insecticides are used to control insects such as ants, cockroaches, and mosquitoes. They come in different forms including sprays, baits, and traps. Some common active ingredients in insecticides include pyrethroids, organophosphates, and carbamates.
