CHARACTERISTICS

**KELOM COTTON**’s components mobilise the special plant process for the adaptation to particular stress conditions, increasing and maintaining the retention capacity of flowers and small fruits in the most advantageous positions and branches, to maximise production and the earliness of the crop.

**MAXIMIZE COTTON PRODUCTION**

**INCREASED RETENTION AND QUALITY OF THE CAPSULES**

**PRECOCITY**

**KELOM COTTON**’s is made of enzymes and growth substances from natural origin by a special fermentative extracting procedure from seaweeds, in order to stabilise and balance its composition, it contains organic acids (polyhidroxicarboxylic acids) and chelated micronutrients for the elimination of yield’s limiting factors. Micronutrient is known to take part in essential enzymes needed to compensate the loss of cellular energy. The preparation is completed with a metabolic activator.

**APPLICATIONS AND DOSAGE**

<table>

</table>

A higher growth and yield in cotton cropping is obtained with **KELOM COTTON**

**1º Addición**

- Increases the number of fruitful branches and positions within them.
- Issuance of all possible fruiting bodies.

**2º Addición**

- Retention around 60% of fruiting bodies.
- Balanced development and maintenance of the emission of these organs.
- Formation and ripening of fruits.
- Precocity of the harvest and greater number of harvestable capsules in the 1st collection.

**PACKING**

- 1 L
- 5 L
- 20 L
- 1000 L
