SOLDENSO is a formulated nutritional product and not just a simple mixture of raw materials, as are most of NPK fertilizers in powder form. It has an uniform and simultaneous solubility of all the nutrients, during use, while avoiding sedimentation in the storage containers of the nutrient solution. In contrast, common NPK water soluble powder fertilizers, which are produced through a mixture of raw materials, have increase variability in grain size that results in a non-uniform dilution of nutrients, since the smallest grains are dissolved firstly.

The conductivity and the salinity index are maintained in very low levels so that the soil will not be burdened with undesirable, salt concentration.

**CHARACTERISTICS**

- Neutral pH, unlike most liquid foliar that are highly acidic or highly alkaline. SOLDENSO can be used at higher doses, not being aggressive with the cells that form stomas.
- More comfortable for the farmer to dosing per volume instead of on weight.
- Best solution in terms of speed and ease to use. Allow higher liquid dispersion homogeneity than solid products.
- Guarantee solubility by its GEL formulation.
- Adjuvant: promotes effectiveness of plant protection products when applied jointly.
- Multiple formulas for different crops and different stages of growth.

**GREATER PERSISTENCE**

**BETTER UPTAKE**

**HIGHER EFFICIENCY**

**YELLOW GEL**

*During the vegetative and fruit stages*

**BLUE GEL**

*For application during the vegetative stage and stress situation*

**GREEN GEL**

*Improves the development of the root system and promotes flowering and fruit set*

**RED GEL**

*Improves fruit sugar content and promotes fruit development and size*
